| How does this articulate across tribal lands? | We could easily have a piece of the roadmap speciifc to tribal commitees. We view this as a cross-boundary project, so yes, we will be identifying how this articulated across tribal lands |
| <p>How can the roadmap be an interactive product? Ability to input the specifics of the situation to help identify potential opportunities?</p> <p>Please explain what is a roadmap. Details of what it does</p> | We want the program described in one place; this is what the program does, here's how it links to other programs, here are the application deadlines, the amount of time, the matching requirements, contact information, and a link straight to the applcaiiion. We will also tie in how different programs link together to address specific community needs; users can identify which programs will help with their specific needs. Funding programs as well as technical assistance programs. We need to link data and science available to the programs available from a planning standpoint. Being able to present a map with similar terminology consistent to breaking down all programs, since all programs are obvisouly not presented consistently across organizations. This will hopefully cut down some of the time spent in search of the right program. |
| is the roadmap consistent nationwide? | The roadmap is in development and is intended to be consistent at a nationwide level. |
| Where will the roadmap live? Who maintains it? | To be determined. Funding aspects still need to identified (though there is a lot of support for the program, so funding will soon follow). We have decided it shoudn't be on federal agency websites. We would like the federal agencies to link to a roadmap site so that only one site needs to be updated and maintained. |
| Army Corps of Engineers and Silver Jackets are working on very similar roadmap products, many already completed for some states. Are you coordinating efforts? | Yes, they are a key player and have been great with providing insight. |
| Other than BAER, what other programs is the group lo | These will all be spelled out in the roadmap, but it can be a large list that the navigator would be knowledgeable of and help the community understand what works and what may not work with their community. |

| Thinking about the stress levels involved for local and state folks in dealing with post-fire, the ability to enter in details and then have the possible solutions “spit out” would streamline the amount of additional work needed to get to a solution. | That's our hope for the roadmap resource - maybe not on day one, but certainly as the tool evolves. |
| That graphic is really problematic for end-users. Please think about how communities will use it and make it focused on what communities need (leading to federal programs) as opposed to the programs that communities have to wade through. | This was not the intent of the graphic. As the roadmap grows, we will need to think of the graphics to support the program. |
