IN PERSON

BIANNUAL CONFERENCE & WORKSHOP

This ATF event is the nation's largest...

After the Flames

brought to you by Coalitions & Collaboratives

After the Flames is a comprehensive suite of services, tools & resources aimed at providing direct support to communities impacted by wildfire.

Over the last 38 years, wildfires have burned an average of 5.2 million acres annually in the United States. Many remain inconsequential, but some exceed 300,000 acres, accompanied by the need to rebuild homes, businesses & infrastructure. The long-term costs to communities & ecosystems include flooding, debris flows & long-term impacts, incurring costs well beyond the year of the burn. Loss of homes & infrastructure due to flooding are examples of post-wildfire's impacts on people, communities & economies. These events cause major shifts in ecosystem composition & structure, often permanently changing the landscape. Much of the recovery & restoration borne by state & local entities, & by residents & businesses in the fire scar.

Drawing on over 20 years of experience in post-wildfire recovery, Coalitions & Collaboratives (COCO) established After the Flames in 2019. This initiative offers a range of programs designed to increase national capacity for wildfire recovery, ultimately aiming to reduce the impact on communities and ecosystems.

PROGRAM CONTACT
Maria Brandt | Maria.Brandt@co-co.org

- GOALS**
- Provide Direct Non-Federal Post Fire Support
 - Build a Skilled Post Wildfire Workforce
 - Increase leadership capacity to help communities respond to & recover from wildfires.
 - Expand Post Wildfire Support Systems
 - Strengthen post-fire response to reduce impacts on communities & ecosystems.
 - Raise Awareness & Share Resources
 - Convene non-federal post-fire experts & practitioners to share resources, collaborate, & learn.

COMMUNITY MITIGATION ASSISTANCE TEAM

The CMAT works closely with Incident Management Teams, the U.S. Forest Service or other land management agencies, and community residents and leaders to identify mitigation opportunities before fire impacts the community.

COLDFIRE SEQUESTRATION

Coldfire is a group of mycology researchers investigating the use of native fungi to heal and improve our forests with the forest ecology itself.

Fungal-produced composts have been scientifically proven to hold twice as much carbon. This could provide an opportunity in which to increase our carbon stores naturally and safely.

WE ARE TEAM COCO

Here to mentor and support, or connect you to the appropriate resources. Email us at coco@co-co.org.

2432 S. Downing St. Suite 200 | Denver, Colorado 80210 | 719-412-3747

training on-site

FIELD DAYS

WEBINARS

ONLINE

COMMUNITY WILDFIRE MITIGATION BEST PRACTICES TRAINING

The CWMBP national-level training is designed for current or future mitigation specialists, wildfire program leads and others who work with residents and their communities, to become more efficient and effective at reducing wildfire risk.

COMMUNITY NAVIGATORS

Community Navigators support community-based partners to access federal funding opportunities, create partnerships, and build capacity for wildfire risk mitigation and climate resilience.

AFTER THE FLAMES

After the Flames' signifies not just a strategic framework. This framework is our approach to post-disaster response encompassing a holistic strategy for workforce development, policy refinement, program innovation, and resource provision.

AIM GRANT

CCOCO offers a unique wildfire mitigation funding opportunity for a wide variety of capacity-building activities, including personnel, planning and wildfire risk reduction work on non-federal land.

REVOLVING LOAN FUND

Bridge funding for project implementation for conservation collaboratives. Funding is designed to increase the efficiency and impact of existing investments.

CO-CO.ORG

CO-CO.ORG

- Scholarships (Conference & Workshop)**
- Fund scholarships for individuals from diverse communities, ensuring diversity in leadership
 - Support professional development of emerging leaders in the field

- Agenda Development (Conference & Workshop)**
- Partner with us in shaping the agenda to address the most pressing issues
 - Suggest & coordinate key session topics to enhance the experience

- Staffing (Conference & Workshop)**
- Volunteer or staff to assist with registration & participant services
 - Offer expertise & manpower where hands-on training is impactful

- Donation Support (Conference & Workshop)**
- Establish partnerships with local businesses & organizations

Using Mentimeter

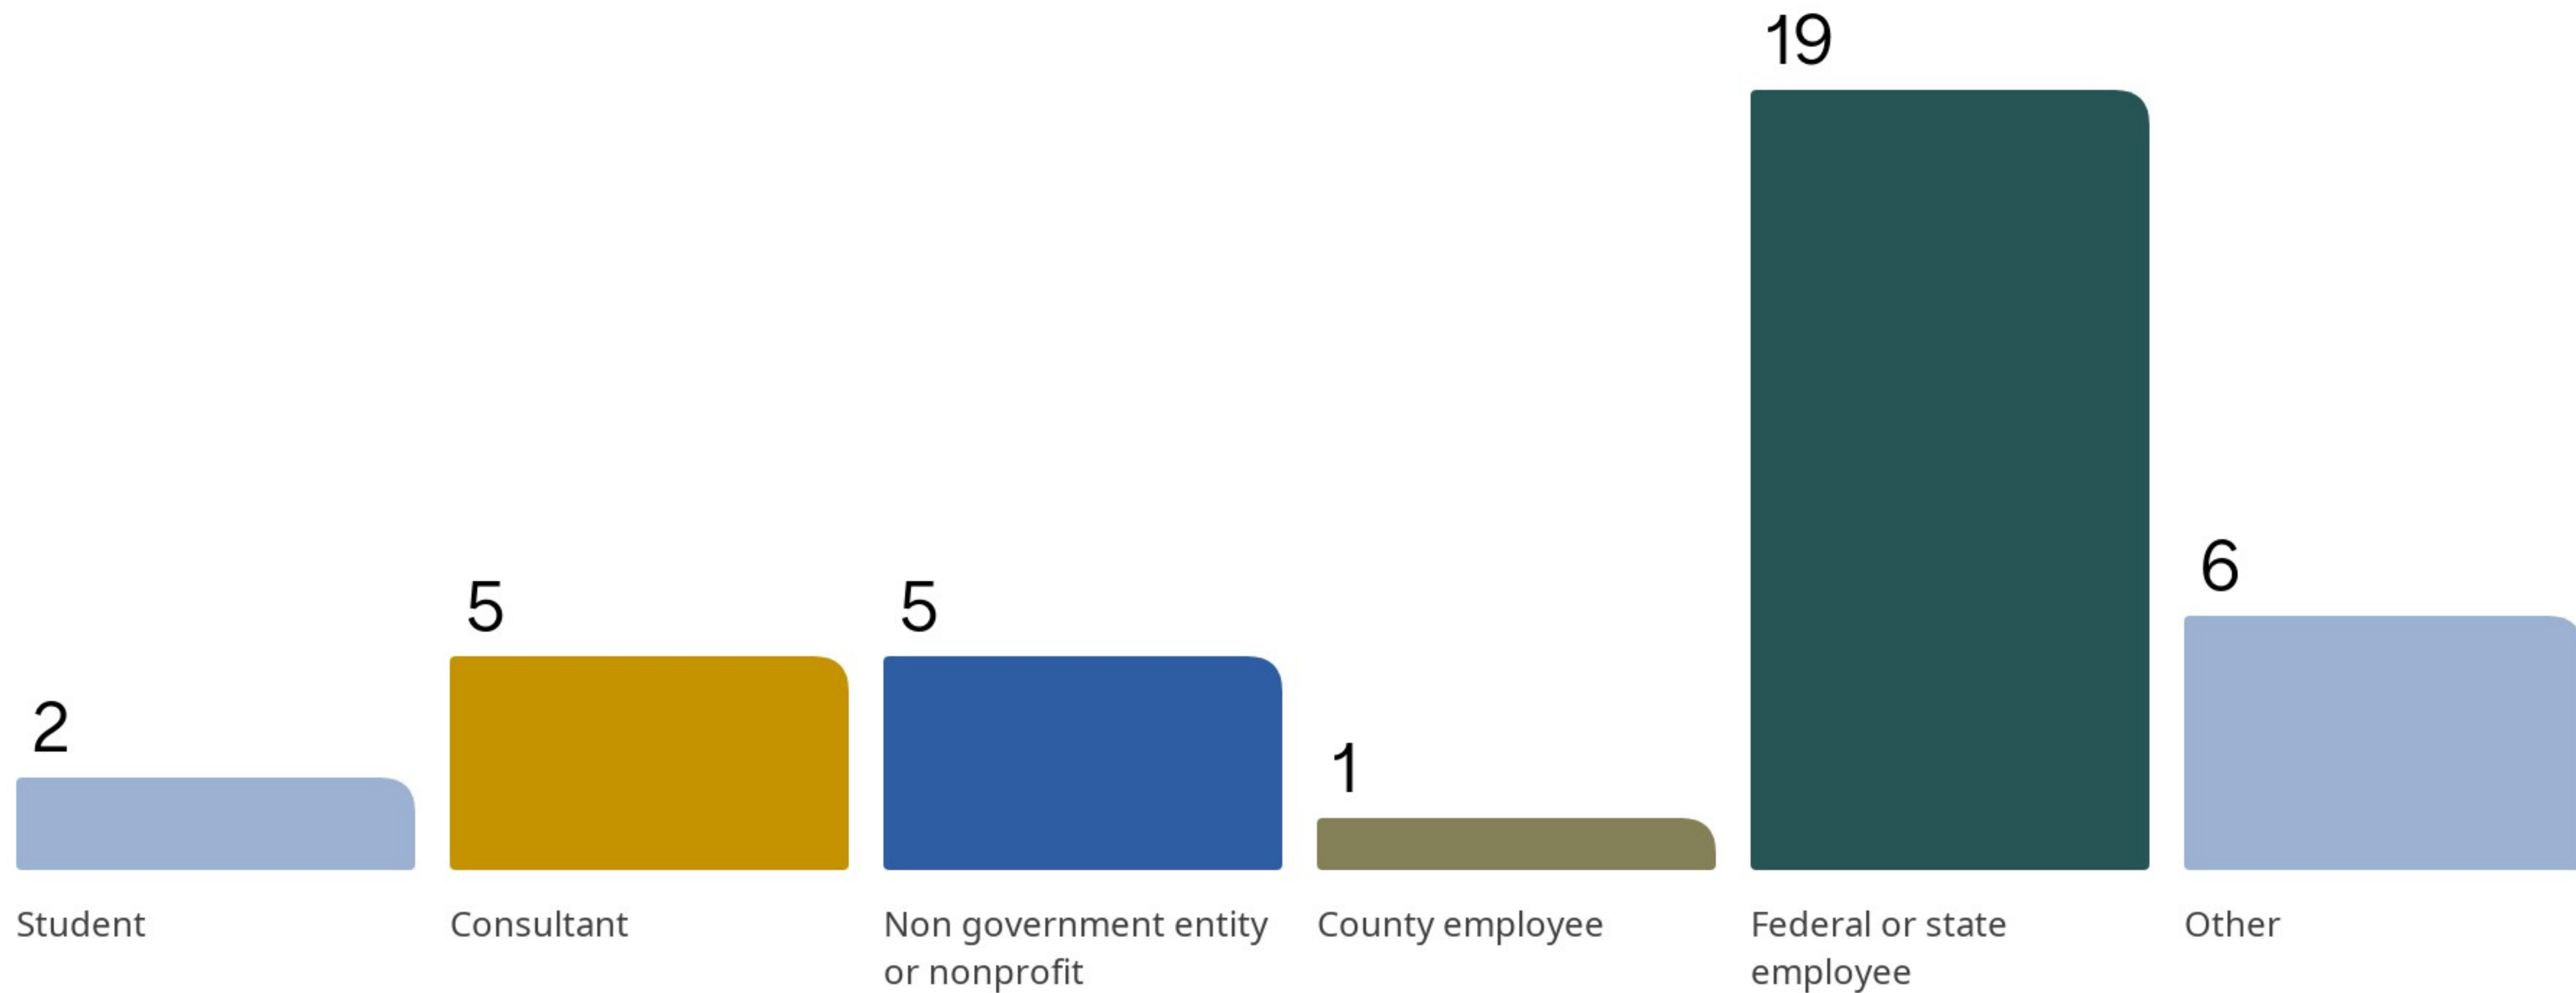

- Scan the QR code or enter menti.com into your computer's web browser
- Enter the code given in the QR box or info bar above
- Follow along and participate in the webinar

Discussions, Polling, Q&A

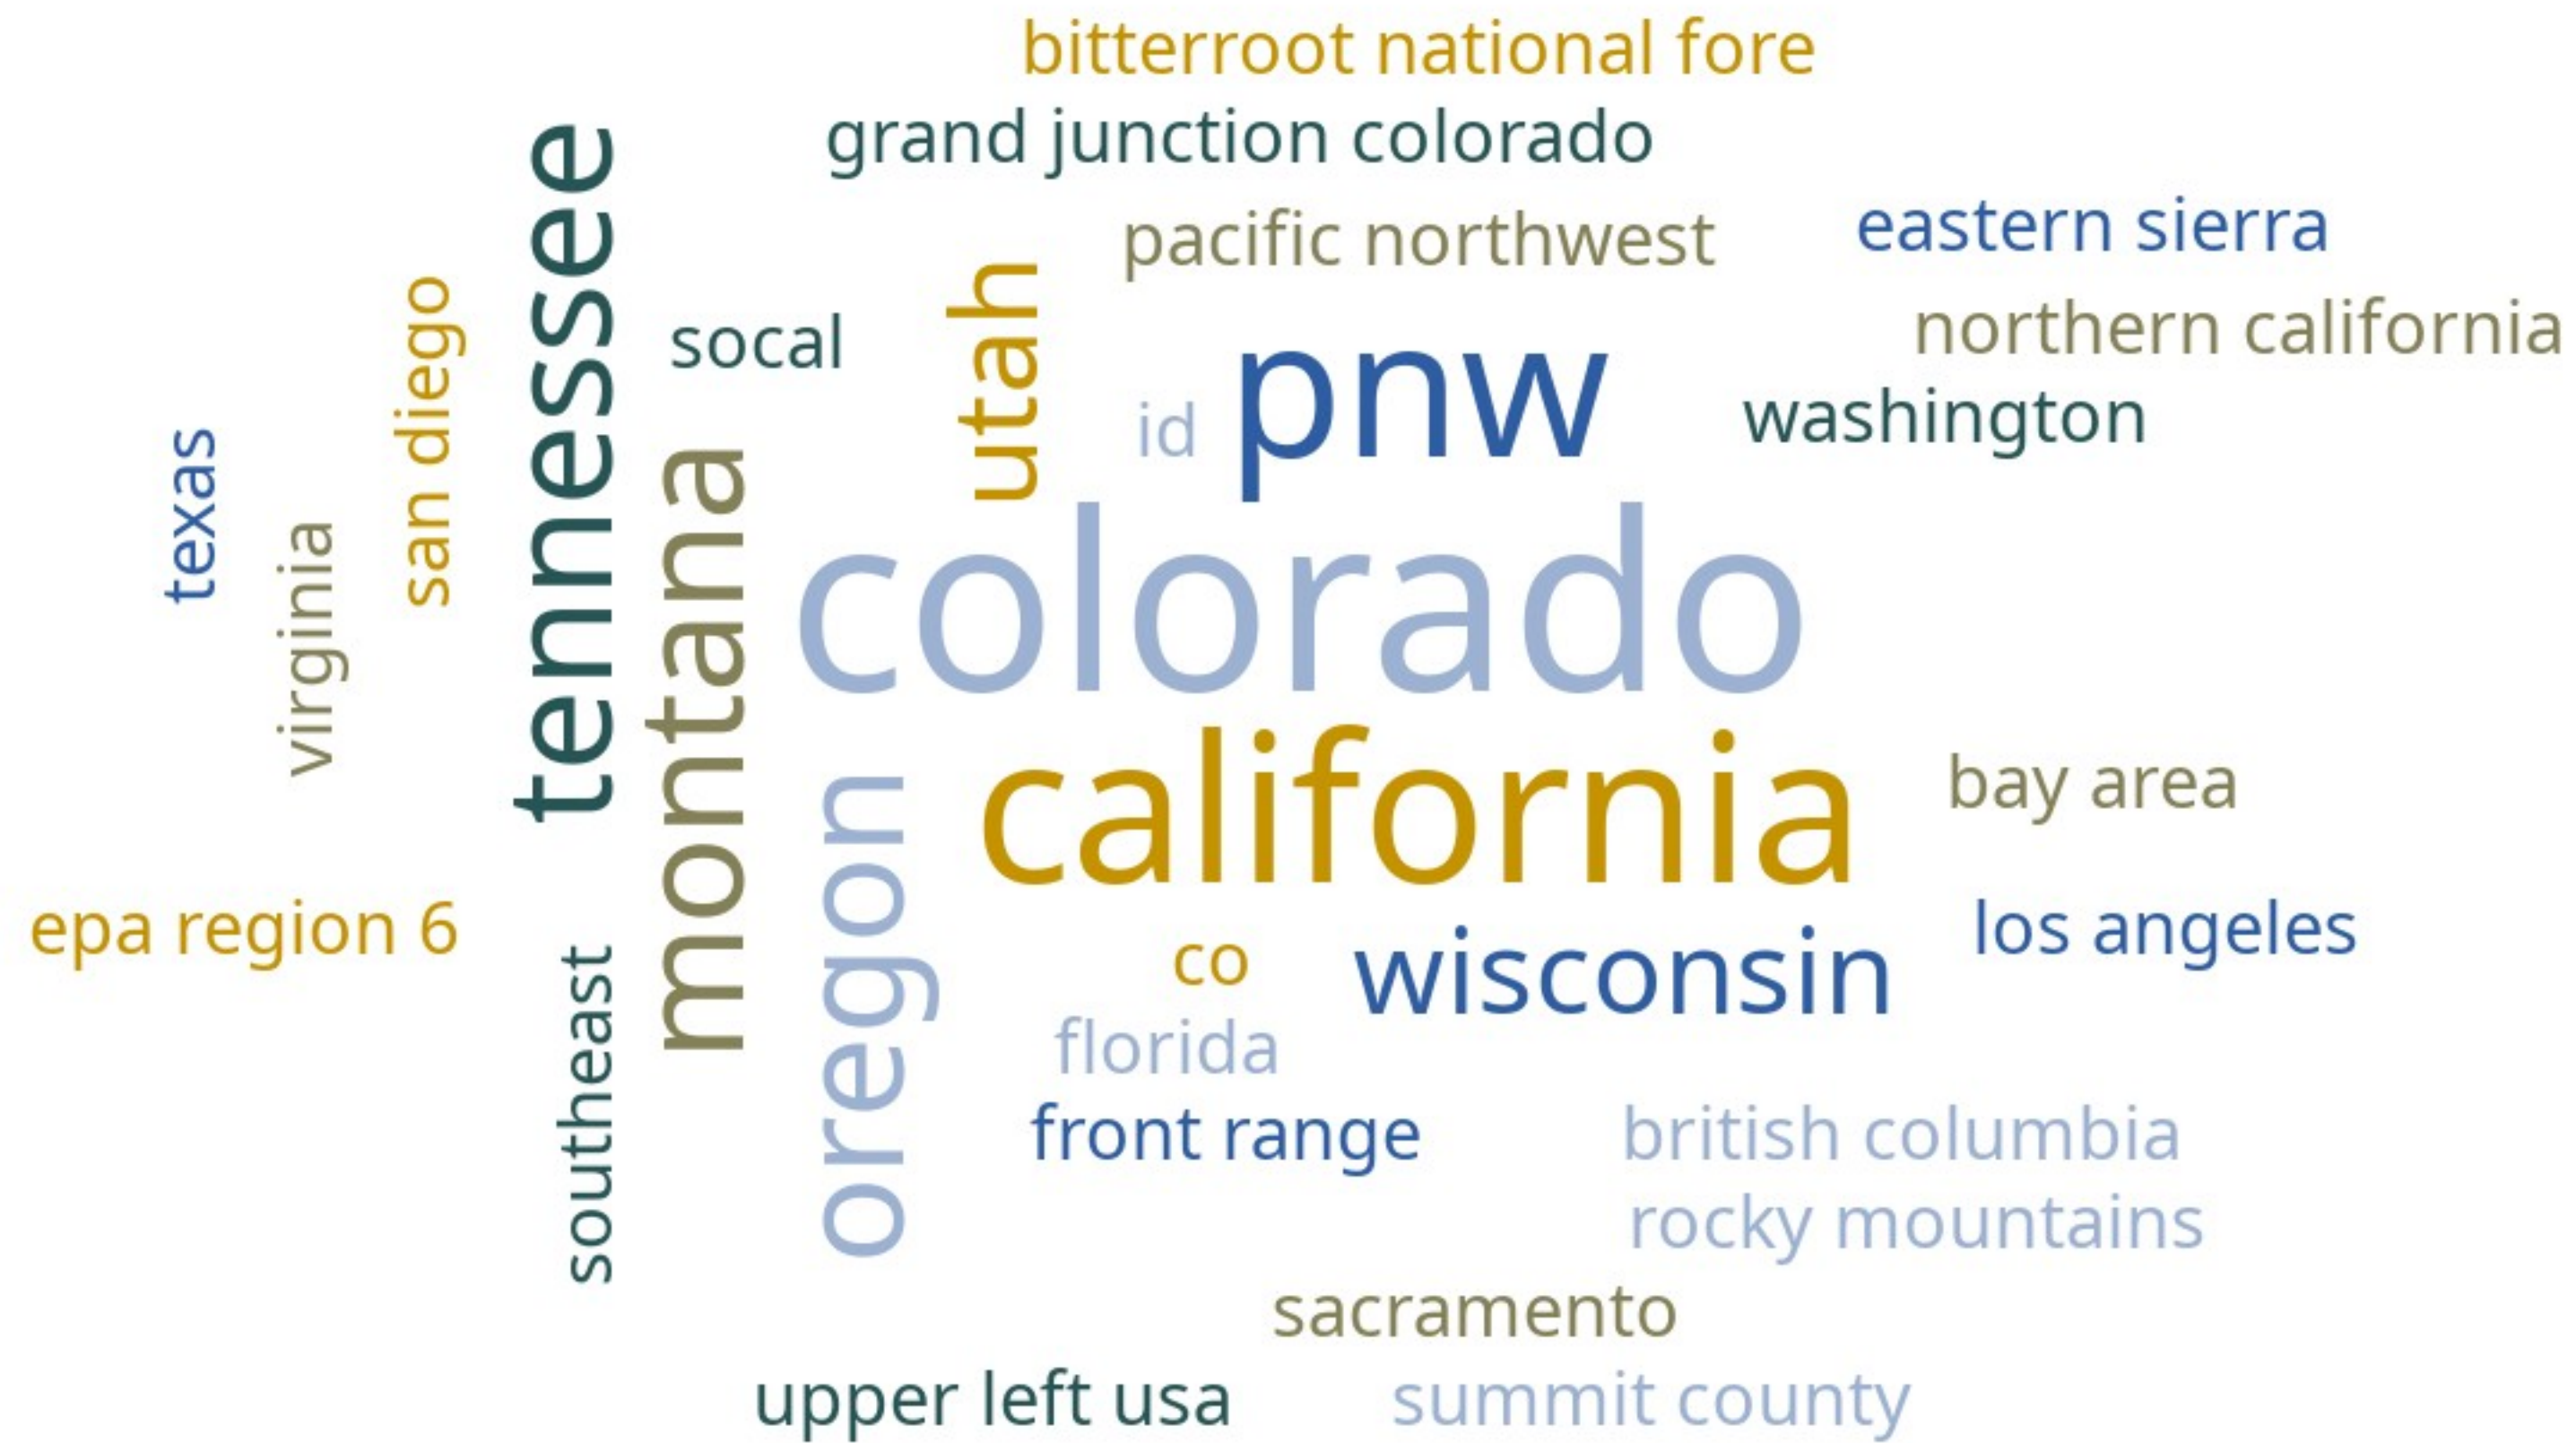

- Polling is anonymous. Please be respectful & professional.
- Please note we will try to address all questions and comments in the webinar
- Monitoring Zoom Q&A, but please consider adding to Menti first

I'm a

What geographic location are you joining us from?

57 responses

What do you hope to get from this webinar?

Information about post fire recovery

Guidance on wildfire recovery plan development and where to start

Ways to address pre-fire mitigation to help with post-fire recovery

More background and reference resources for post-fire components of a CWPP.

Recovery

Planning goals and mitigation goals on addressing areas of potential debris flows in fire-prone areas.

A starting point for developing an assessment program.

Knowledge and build relationships in the WFWG

What do you hope to get from this webinar?

Restoration tips.

better understanding
of BAER

Learn more about baer
methods and practices

Post Fire Recovery

A better understanding
of your program

A better understanding on
how to perform some of
the post-fire hazard
assessments for erosion
and debris flow.

Linking federal
response to local
entities

Framework for post-fire
response to put into
our CWPP

What do you hope to get from this webinar?

Wildfire Mitigation

Recovery tips

Clear understanding and tools to assist with post fire assessment processes.

Post-fire response

Limits of modeling

Understanding federal processes for BAER maps. Colorado is considering trying to build out a State BAER team to help assist on non-federal lands.

Weed strategies.

A better understanding of the processes associated with post-wildfire/assessment. Anything geospatial is appreciated!

What do you hope to get from this webinar?

Learn more about BAER

More awareness of BAER operations and how that model can help our communities.

How fed BAER and private land BAER efforts are coordinated.

Cara Sponaugle, National Post-Fire Program Leader Post-Disaster Recovery Team USFS

After completing a few degrees focusing on forest soils, Cara caught the firebug several years ago with the Burned Area Emergency Response (BAER) program evaluation of post-fire landscape effects. As a result, she has worked for over 20 years as a soil scientist & post-fire specialist across the US.

Cara has been serving as the National Post-fire Program Lead for the USFS since 2019 & recently assisted the governments of Greece, Portugal, Canada & India with post-fire response.

Post-fire Response and Recovery is part of the Fire Management Cycle

The Four Phases of Post-fire Response

Repair

Short-term – starts before fire containment

Repair damage from fire suppression activities

Emergency Response

Short-term – within 1 year of the fire

Manage the higher risk of post-fire flooding and debris flows

Rehabilitation

Mid-term – within 5 years of the fire

Repair infrastructure damaged by the fire and aiding natural recovery in high-priority areas

Recovery

Long-term

Restoring ecosystem functions to desired condition

Emergency Response

What is post-fire risk management?

- Identify imminent post-wildfire threats to critical values
- Take immediate actions to manage unacceptable risks

The BAER Process

Identify critical values

Assess for threats

Evaluate risk

Develop response strategy

Implement the strategy

Critical Values identified by Portugal (USAID)

Critical Values identified by Greece (USAID)

Critical Values used in British Columbia BAER Demonstration

Critical Values – ETART (OR, HI)

USFS Critical Values

- People
- Infrastructure
- Special natural and cultural resources

On NFS lands

What are your
priority or
critical
values?

What are your priority or critical values?

79 responses

The BAER Process

Identify critical values

Assess for threats

Evaluate risk

Develop response strategy

Implement the strategy

Post-Fire Threats

- Soil erosion and sedimentation
- Increased flooding
- Rock fall and debris flows
- Dead and falling trees
- Invasive Species

Post-fire Response and Recovery is part of the Fire Management Cycle

Questions and Discussion |

Questions & Comments

How do you determine how many points to sample in the field to develop a soil burn severity map?

I would love to see more of this programming especially a model across boundaries such as federal, state, and private lands.

Great presentation! You mentioned a coordination of landownership/ responsible agencies. Do you have a list or tool to use in field for guidelines?

is there a threshold at which fires on non-federal lands could access help running through the BAER process (or similar)?

Menti kept me engaged during the entire presentation. Thank you for exposing me to it. Our forests, on military installations, are mutually beneficial to our military mission as well as the USFS.

For BAER work on non-federal lands, is it common for State entities to get the same access to satellite products that feed the BAER maps?

How does BAER fit with MTBS?

A lot of conservation districts are working on pvt land BAER efforts too

Questions & Comments

we directly access Sentinel and Landsat imagery to make our own BARC maps! Following the process used by GTAC

Do you know if Vibrant Planet has that burn severity data too?

Is burn severity generally based around dNBR (difference of Normalized Burn Severity) index?

Thank You

A recording of this webinar will be available at AfterTheFlames.com. You will also receive a follow-up email of the recording with links to any resources shared.
